Dear Doctor:

The newborn screening test on the above-referenced infant showed the presence of hemoglobin F (fetal), A (adult), and C. This is the finding consistent with Hemoglobin C trait.

Hemoglobin C trait, as you know, is not a disease and does not require any specific treatment. We do, however, suggest a repeat screen for confirmation of this finding. The parent has been notified by letter that a repeat screen is necessary.

If you have any questions please call the Newborn Screening Program Office at 302-744-4544 or toll free at 1-800-262-3030.

Sincerely,

A handwritten signature in black ink that reads "Louis Bartoshesky". The signature is written in a cursive, slightly slanted style.

Louis Bartoshesky, MD, MPH  
Genetics Medical Director
